

CRG Technician position
CRG Programme: Core Facilities
Unit: Proteomics

Post Description: Lab technician

A position is open for a research technician in the Proteomics Core Facility of *Centre de Regulació Genòmica* in Barcelona. The available position is focused on identification of proteins by HPLC and ESI based mass spectrometry and will include sample handling. The position will also include lighter administrative tasks.

Candidate requirements

- Highly motivated, organized, and willing to learn and to apply new techniques and methods.
- Experience of LC and/or mass spectrometry is preferred but not required.
- Capable of working independently and in team.
- Good communication skills and fluent in English.
- Good skills with Microsoft Office software suite.

Work environment

The successful applicant will join an expanding Proteomics Core facility which is working closely with scientists in the *Parc de Recerca Biomèdica de Barcelona*. The Proteomics Core facility is composed of an international team of scientist with a total of more than 20 years experience in mass spectrometry based proteomics. We offer an exclusive work environment in a modern research insitute, a competitive salary and an excellently equiped laboratory with *state-of-the-art* equipment.

Application procedure

All applications must include:

- A presentation letter in English addressed to Dr. Molina
- A full CV in English, including contact details
- 2 reference letters
- A possible start date

Deadline: May 10th, 2009

Please submit your applications to the following email address, indicating the offer reference in the subject message: rrhh@crg.es
